Research Interests

My research builds LLM agents that are capable, personalized, and learn reliably from feedback.

Agentic Reinforcement Learning: how agentic RL data scales across tasks, environments and trajectories.
Agent Memory: turning retrieved knowledge into parametric memory that needs no online retrieval.
LLM Personalization: the internal mechanisms that drive personalization in LLMs, and how to steer them.
Generative Recommendation: semantic-ID recommenders, from collaborative signals to deployment.
Multi-Agent Systems: what agents communicate, and how to audit and evaluate it.
